

# The experts in site-specific environmental systems for all businesses

**The industrial and mining sectors have long strived towards the idea of economically and environmentally sustainable closed-loop chemical recycling, and companies like Prochem Agencies are making real progress towards that goal.**

**W**e supply site-specific environmental business systems and best-practice environmental management, solving problems both at the source and in the wider environmental sphere.”

says General Manager John Colvin, adding that environmental management packages with significant cost reductions are tailored to suit individual customer needs.

“We combine extensive field experience and proven technical expertise to manage, monitor, correct and minimise industrial waste, pollution, corrosion and contamination,” John said.

“Our clients include the resources sector, oil and gas production, refining and exploration, minerals processing, industrial distribution, government regulators and environmental services sectors.”

Working out of Mackay in conjunction with JJ Richards’ specialist water treatment services and chemicals arms, Prochem Agencies offers a total chemical management package, from production to use in plant and equipment cleaning to consolidation, treatment and disposal of subsequent industrial waste.

The company’s coolant management service offers a fine example of Prochem Agencies’ ‘life cycle’ approach when it comes to chemicals.

“We’re the distributors for PG Plus Engine Coolant – a non-hazardous, non-poisonous propylene glycol-based engine coolant suitable for light and heavy duty diesel and petrol powered engines. We bulk it to site, provide storage and dispensing systems and recycling and waste disposal options – as well as providing onsite technicians to monitor performance.”

That’s only the tip of the iceberg, though, in terms of the services on offer at Prochem Agencies: they also provide site-specific environmental services such as water treatment, collection and recycling processes, spill response equipment and training and preventative maintenance services and bio-remediation programmes.

In the case of the latter, John says that using new technologies like Gel Blocks in place of liquid chemicals

“Our clients include the resources sector, oil and gas production, refining and exploration, minerals processing, industrial distribution, government regulators and environmental services sectors.”

JOHN COLVIN – PROCHEM AGENCIES

can offer big advantages, not just in terms of reducing maintenance, warehousing and transport costs.

“25kg of Gel Blocks is equivalent to 1000 litres of liquid product, and they have applications not just in areas like hydrocarbon and in-situ bioremediation but also for dust management and water reduction programs.”

Another innovative product on offer is a water-resistant soil-binding emulsion called Soil Guard, which has applications in the agricultural,

civil, agriculture and infrastructure industries.

Prochem Agencies takes customers’ concerns about their environmental footprint seriously, and currently has a team of five dedicated environmental field maintenance staff with more at the ready.

For a customised, cost-effective environmental management package, call Prochem Agencies Mackay on 4952 3566.

# INFRASTRUCTURE MANAGEMENT

Services that deliver results for your business AND the environment

- ~ Chemical management
- ~ Waste treatment, collection and recycling
- ~ Spill response equipment and training
- ~ Preventive mine site maintenance services
- ~ Bio-remediation programs
- ~ Warehousing and distribution
- ~ Powerline support and road maintenance
- ~ Order and delivery management

**RESOURCE SECTOR**

- OIL & GAS – PRODUCTION, REFINING & EXPLORATION
- MINERALS PROCESSING
- IRON AND STEEL
- INDUSTRIAL DISTRIBUTION CENTRES
- GOVERNMENT REGULATORS & SERVICES
- ENVIRONMENTAL SERVICES

**PROCHEM AGENCIES**
