

# PRODUCT 2B Clean

## Introduction:

**2B Clean** is a high performance hard surface and toilet bowl cleaner and sanitizer built to the demanding standards required for organic certification. It is a new generation formulation that is powerful in cleaning action, non toxic, naturally based, and non irritant.

**2B Clean** is moderate to low foam in use, making it easy to rinse from surfaces after cleaning. The powerful wetting agents quickly penetrate soils, soap scum, and greasy deposits on all hard surfaces, then lift and suspend this contamination in the detergent solution making surface rinsing quick and effective.

**2B Clean** does not have the toxic, corrosive, or irritating side effects of strong cleaning formulations yet produces similar performance results. It is ultra safe to use on all surfaces and in all areas.

**2B Clean** also contains a natural sanitizing agent to help provide effective control of micro organisms on surfaces, particularly in toilet bowls.

**2B Clean** contains natural eucalyptus oil to leave a light fresh fragrance after cleaning.

## Features:

- Excellent hard surface cleaning properties
- Certified Organic
- Contains natural organic sanitizing agent
- Moderate foaming for easy rinsing
- Safe, Effective and Economical
- Cleans and removes bacteria at the same time
- Removes soap scum in showers
- Viscous liquid for extra cling to vertical surfaces.

## Specifications:

Appearance -	Clear deep green viscous liquid
Viscosity -	2000 centistokes @ 18 <sup>o</sup> C
Odour -	Eucalyptus

## Directions for Use:

### For Toilet Bowls

Use **2B Clean** as supplied- Spray or squirt product on and around the upper areas of the bowl and in particular under the rim. Allow to run down the sides of the bowl for a few seconds then scrub with a toilet brush to loosen soils. Flush the toilet to produce a clean sanitized shiny surface.

### As a Shower Cleaner

Dilute **2B Clean** 40 mls to every litre of water used in a bucket or spray bottle. (A table spoon to a 500ml spray bottle) Apply to surface, allow contact for 5-10 seconds and then agitate gently with a sponge to remove any soils present. Rinse with fresh water to leave a clean streak free surface. Regular use helps control bacteria and fungus buildups in grout and difficult to reach areas.
