

PRODUCT E-Degrease

Description:

E-Degrease is a Heavy Duty solvent free degreasing formulation for the removal of grease and oil from machinery components via drum mounted parts cleaning machines or fully enclosed automated cleaning systems.

Application:

E-Degrease is a new generation environmentally responsible degreasing formulation to replace petroleum hydrocarbon solvent products in environmentally sensitive areas. Being based on vegetable esters it does not have the odour, volatility or polluting potential of common petroleum hydrocarbon based products, making it also very suitable for use in confined areas.

E-Degrease has a powerful solvent action to remove the most difficult oil or grease residues such as bitumen based products found in the mining and earthmoving industries. It is also excellent for removal of bitumen residues from road construction vehicles and equipment, providing a real alternative to diesel in these applications. Because of its inherent safety **E-Degrease** may also be used in and around food handling areas for the removal of cooking oil residues. The low odour and very low toxicity makes it an ideal wipe on wipe off cleaner.

Features:

- Readily biodegradable formulation
- Low odour and low volatility
- Does not contain petroleum hydrocarbons
- Powerful cleaning action for difficult deposits
- Suitable for confined space applications
- Suitable for use in food handling areas

Technical:

Appearance:-	Clear yellow/brown low viscosity liquid
Odour:-	Slight citrus
Specific Gravity:-	0.87 @ 20 ⁰ C.
Flash Point:-	>85 ⁰ C (C.O.C)
Solubility:-	Emulsifies in water

Directions for Use:

E-Greaser should be applied as received by brush, spray or immersion techniques. Allow to remain in contact with grease for 3-5 minutes then pressure rinse off with water.
